ABSTRACT

In Taiwan's universities and colleges, the engineering department is a significant asset to higher education programs, and the department chair is expected to play multiple roles and take on many responsibilities. In order to know these roles and responsibilities better, 4 roles and 29 responsibilities were identified and constructed into a questionnaire that was mailed to all 377 engineering department chairs in Taiwan. A total of 256 chairs (67.9%) returned the questionnaire and reflected on their perceptions of the importance and loading for each responsibility. It was found that the agreement between respondents' perceptions of importance and loading was very high. Creating a shared vision by setting goals and developing plans, recruiting students, and determining faculty and staff roles were perceived as the top three important responsibilities. Creating a shared vision through setting goals and developing plans and developing and revising curricular programs were perceived as the top two heavy loading responsibilities. (Author/SLD)

Abstract —In Taiwan's universities and colleges, the engineering department is a significant asset to higher education programs and the department chair is expected to play multiple roles and take on many responsibilities. In order to better know the department chairs' roles and responsibilities, 4 roles and 29 responsibilities were identified and constructed into a questionnaire, which was mailed to all 377 engineering department chairs in Taiwan. Finally, 67.9% of the chairs (i.e., 256 chairs) returned the questionnaire and reflected on their perceptions of the importance and loading for each responsibility. It was found that the agreement between all respondents' perceptions of importance and loading was very high. Creating a shared vision setting goals and developing plans, recruiting students, as well as determining faculty and staff roles were perceived as the top three important responsibilities. Creating a shared vision setting goals and developing plans as well as developing and revising curricular programs were perceived as the top two heavy loading responsibilities.

Index Terms —competency model, engineering department chairperson, higher education, leadership and management

A department chair/head should be not only a scholar and a teacher but also a manager and a leader. In order to become a successful department chair, a present or prospective chair needs to know what is expected of him/her and to continuously enhance his/her competencies. Some universities have devised training and development programs for department chairs [1]. For example, the Administrative Development Program (ADP) at the the University of Minnesota developed a competency model for the position of chair/head in an academic unit. In the model, the following four components were emphasized: (1) key functions of the department, (2) roles and responsibilities of the chair position, (3) competencies (knowledge, skills, abilities and attributes—KSAA) of the chair position, and (4) assessment of roles and responsibilities and KSAA for the chair position [2]. Roles and responsibilities represent the work agenda of the department chairs and are based on position expectations defined in university policy and held by multiple stakeholders, such as faculty, staff, students, collegiate administrators, and outside groups.

In Taiwan's universities and colleges, the department plays a substantial role in higher education programs, and the department chair is highly expected to play multiple roles and take on many responsibilities. In order to better know the engineering department chairs' roles and responsibilities, the ADP's 4 roles and 32 responsibilities were translated and modified to 4 roles and 29 responsibilities of an engineering department chair. Three present/former engineering department chairs assisted with wording the draft during its modification.

The modified engineering department chair's roles and responsibilities were constructed into a questionnaire and mailed to all 377 engineering department chairs in Taiwan in December 2002. After a follow-up, 67.9% of the chairs (i.e., 256 chairs) returned the questionnaire and reflected on their perceptions of the importance and work loading for each responsibility rated on a five-point Likert scale (1-lowest, 5 -highest).

All 256 respondents' characteristics are shown in Table 1. 41% of the respondents were working for public institutions while 59% were working for private institutions. In Taiwan, engineering departments exist in both academic universities/colleges and universities/colleges of technology. Table 1 indicates that 41.8% of the respondents worked for academic institutions while 58.2% worked for technological institutions. 59.4% of the respondents had 2-3 years of chair experience.

Tables 2 and 3 present the means and ranks of respondents' perceptions on the five-point Likert scale of each responsibility. The Spearman rank order correlation coefficients for the following bivariate sets of paired XY rankings were calculated as follows:

1. Total chairs' perceptions of the importance (X/M_i) and loading (Y/M_w) for each responsibility (see Table 2): $r_s(27) = .85, p < .01$.
2. The public institution chairs' perceptions of importance (X/M_{ip}) and the private institution chairs' perceptions of importance (X/M_{ir}) for each responsibility (see Table 3): $r_s(27) = .96, p < .01$.
3. The public institution chairs' perceptions of loading (X/M_{wp}) and the private institution chairs' perceptions of loading (X/M_{wr}) for each responsibility (see Table 3): $r_s(27) = .91, p < .01$.
4. The academic institution chairs' perceptions of importance (X/M_{ia}) and the technological institution chairs' Perceptions of importance (X/M_{it}) for each responsibility (see Table 3): $r_s(27) = .96, p < .01$.

5. The academic institution chairs' perceptions of loading (X/M_w) and the technological institution chairs' perceptions of Loading (X/M_w) for each responsibility (see Table 3): $r_s(27) = .91, p < .01$.
Because the agreement between each of the above five pairs was very high, all respondents' perceptions of importance on each responsibility may represent the major opinions. Therefore, the following conclusions can be made:
 1. The 4 roles and 29 responsibilities identified may serve as the ought-to-be/ideal references
As shown in Table 2, each of the 29 responsibilities, comprising the 4 roles, was valued higher than 3, the median of the five-point scale. Hence, the 4 roles and 29 responsibilities identified may serve as the ought-to-be references of an engineering department chair's roles and responsibilities.
 2. Some responsibilities should be highly emphasized
As shown in Table 2, all 29 responsibilities may be ranked in a descending order as follows:
 - (1) creating a shared vision, setting goals, developing plans
 - (2) recruiting students
 - (2) determining faculty and staff roles
 - (4) recruiting faculty and staff
 - (4) advocating the department's features
 - (4) developing and revising curricular programs
 - (7) fostering teaching activities
 - (7) preparing and managing the budget
 - (9) fostering scholarly activity
 - (9) creating a more productive work environment
 - (9) providing feedback to faculty
 - (9) teaching classes
 - (9) seeking research funding
 - (9) conducting research and scholarly activities
 - (15) managing space and facilities
 - (15) participating in college/university governance committees/task forces
 - (17) balancing the roles of a chair with personal, family, or community responsibilities
 - (17) conducting personal growth activities
 - (19) managing teaching resources
 - (19) participating in development activities of professional associations/networks
 - (21) encouraging service (e.g. committee)
 - (22) supervising and appraising faculty and staff
 - (23) coordinating fundraising and relationships with external constituencies
 - (23) participating in outside committees and task forces
 - (23) performing leadership tasks in professional associations/networks
 - (26) disseminating information
 - (26) participating in examination committees
 - (28) developing faculty and staff
 - (29) providing pro bono/paid consulting services
 Much attention should be paid to demonstrating the first group of responsibilities in the list. For example, creating a shared vision setting goals and developing plans, recruiting students, as well as determining faculty and staff roles were perceived as the top three important responsibilities. They should be highly emphasized.
 3. A competency model should be further developed
In order to effectively help recruit, select, train, empower or retain an effective engineering department chair, a competency model should be further completed, not only identifying roles and responsibilities of the chair, but also identifying key functions of the department. This model should also identify competencies of the chair and develop assessment of the chair's roles and responsibilities as well as competencies (i.e., KSAA).

ACKNOWLEDGEMENT

The author is grateful for the kind written permission from the Administrative Development Program (ADP) at the University of Minnesota to allow him to translate and modify the roles and responsibilities of department chairs and employ them in his questionnaire.

REPRODUCTION RELEASE

(Specific Document)

I. DOCUMENT IDENTIFICATION:

Title: Engineering Department Chair's Roles and Responsibilities in Taiwan	
Author(s): Lung-Sheng Steven Lee	
Corporate Source: National Taiwan Normal Univ.	Publication Date: July 2003

II. REPRODUCTION RELEASE:

In order to disseminate as widely as possible timely and significant materials of interest to the educational community, documents announced in the monthly abstract journal of the ERIC system, *Resources in Education* (RIE), are usually made available to users in microfiche, reproduced paper copy, and electronic media, and sold through the ERIC Document Reproduction Service (EDRS). Credit is given to the source of each document, and, if reproduction release is granted, one of the following notices is affixed to the document.

If permission is granted to reproduce and disseminate the identified document, please CHECK ONE of the following three options and sign at the bottom of the page.

The sample sticker shown below will be affixed to all Level 1 documents

PERMISSION TO REPRODUCE AND DISSEMINATE THIS MATERIAL HAS BEEN GRANTED BY _____ Sample _____ TO THE EDUCATIONAL RESOURCES INFORMATION CENTER (ERIC)
1

Level 1

Check here for Level 1 release, permitting reproduction and dissemination in microfiche or other ERIC archival media (e.g., electronic) and paper copy.

The sample sticker shown below will be affixed to all Level 2A documents

PERMISSION TO REPRODUCE AND DISSEMINATE THIS MATERIAL IN MICROFICHE, AND IN ELECTRONIC MEDIA FOR ERIC COLLECTION SUBSCRIBERS ONLY, HAS BEEN GRANTED BY _____ Sample _____ TO THE EDUCATIONAL RESOURCES INFORMATION CENTER (ERIC)
2A

Level 2A

Check here for Level 2A release, permitting reproduction and dissemination in microfiche and in electronic media for ERIC archival collection subscribers only

The sample sticker shown below will be affixed to all Level 2B documents

PERMISSION TO REPRODUCE AND DISSEMINATE THIS MATERIAL IN MICROFICHE ONLY HAS BEEN GRANTED BY _____ Sample _____ TO THE EDUCATIONAL RESOURCES INFORMATION CENTER (ERIC)
2B

Level 2B

Check here for Level 2B release, permitting reproduction and dissemination in microfiche only

Documents will be processed as indicated provided reproduction quality permits.
If permission to reproduce is granted, but no box is checked, documents will be processed at Level 1.
